AI-Native Full Stack Engineer with 3+ years building fintech, telecom and government platforms. Currently building Saudi tourism licensing and visa platforms on .NET 9, ABP.io and Angular micro-frontends, using DDD across a microservices architecture in a multi-agent AI workflow with Cursor.

Experience

AI-Native Full Stack Engineer — Jan 2026 – Present
Systems Limited, Islamabad, PK

- Worked within a multi-agent Cursor workflow (orchestrator, backend, frontend, code-review and security agents) for a .NET 9 / Angular 20 microservices platform, cutting average feature delivery time in an Agile team
- Used structured prompts (role definitions, file- and line-scoped context, explicit acceptance criteria) to generate .NET APIs and Angular micro-frontend code that matched existing patterns on the first pass
- Rebuilt the bilingual (AR/EN) email, SMS and in-app notification system with per-recipient language resolution and template-based messages
- Integrated 10+ government and third-party systems (Commercial Registration, National Address, bank guarantees, municipal checks), using retry/timeout policies and idempotent writes to prevent duplicate registrations
- Led full-stack development of investor (OTA) and government admin analytics dashboards for a national visa-by-package platform
- Built a HyperPay credit card registration and replacement flow end to end with role-based authorization
- Used AI agents for root-cause analysis during post-go-live L3 hypercare, shipping fixes for 20+ production incidents across licensing, payment and notification flows within an 8–10 hour SLA

Software Engineer — Aug 2024 – Jan 2026
DPL, Islamabad, PK

- Led development for enterprise telecom agent apps for Tanzania and Togo, managing a small engineering team
- Developed core telecommunications use cases including SIM registration(B2B, B2C), SIM swap operations, re-identification and airtime/bundles subscription
- Eliminated redis connection pool exhaustion during 600k+ concurrent sessions by adding connection multiplexing strategy
- Designed and implemented bulk notification scheduler processing 700k-800k push notifications in 7-8 minutes with multilingual support, platform-specific targeting, and images
- Developed static, and dynamic QR using TLV encoding for seamless in-app transactions
- Integrated OTAPP bus ticketing API enabling real-time booking, seat selection, and dynamic fare calculation across 100+ routes within Mixx Tanzania app

Full Stack Developer — Dec 2023 – Aug 2024
Axontick Technologies, Remote

- Developed a responsive React frontend for an AI assistant serving 3,000+ users, integrating ChatGPT, DALL-E, and Llama 3 APIs, cutting initial load time by 40% via lazy loading and code splitting
- Completed a Dubai property platform with React and .NET Core APIs, implementing listing uploads and admin workflows that reduced approval time by 30%
- Integrated Stripe and PassportJS across a luxury-item insurance platform and other client products, improving payment success rate by 25% and cutting manual verification workload by 40%

Early Career: Web Developer & MERN Stack Fellow — Mar 2023 – Aug 2023
LantroTech & Bytewise Limited

- Developed reusable React components for a payment gateway platform, cutting UI development time by 35%
- Built REST APIs with Node.js, Express, and MongoDB as part of a 4-member backend team for the Bytewise Fellowship application platform

Technical Skills

Backend: .NET Core/9, ABP.io, .NET Aspire, Node.js, PostgreSQL, Redis, EF Core, RESTful APIs, Microservices
Frontend: Angular, React, Next.js, Micro-frontends, TypeScript, Redux Toolkit, TailwindCSS
Infrastructure: Docker, Kubernetes, Jenkins, GitHub Actions, AWS (EC2, S3, SQS, Lambda), ELK, WSO2, Nginx
Architecture: Clean Architecture, DDD, QR/TLV encoding, REST, WebSockets

Education

COMSATS University Islamabad (CUI) — Sept 2020 – June 2024
Bachelor's in Computer Science
